

The ABCs of HEPATITIS

More than **5 MILLION AMERICANS** today live with hepatitis.

Most are undiagnosed.

They risk:

Developing serious health conditions

Transmitting the virus to others

Three strains make up nearly all infections.

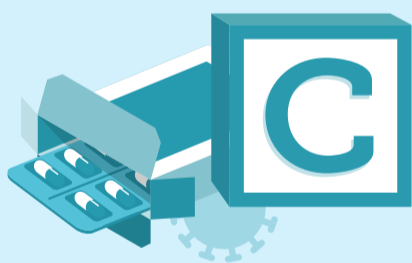

Hepatitis A

- Preventable with a **vaccine**
- Can cause **severe liver disease** if untreated

Hepatitis B

- Preventable with a **vaccine**
- Incurable if caught, but **treatable**
- Can cause **cirrhosis** or **liver cancer** if untreated

Hepatitis C

- **Chronic infection**
- No preventive vaccine, but there are **treatments**
- Can cause **cirrhosis** or **liver cancer** if untreated

Less than 25% of people living with hepatitis B or C know they're infected.

Get vaccinated.
Get tested.

Know Your ABCs when it comes to hepatitis.
