OBESITY &
NEUROLOGICAL CARE

Navigating obesity and a neurological disease requires a holistic approach.

Obesity has been linked to neurodegenerative diseases like:

MULTIPLE SCLEROSIS

ALZHEIMER'S

PARKINSON'S

Obesity can increase a patient's risk of dementia by **about 30%.**

Some neurodegenerative diseases may lead to **OVEREATING** and **WEIGHT GAIN.**

Treating obesity could result in:

IMPROVED HEALTH OUTCOMES

SLOWER COGNITIVE DECLINE

LOWER RISK FOR ALZHEIMER'S DISEASE

AfPA | **Alliance for Patient Access**

Obesity has a significant impact on patients' health.
