

Patient-Centered Care for HEPATITIS C

Patients with hepatitis C may face **underlying challenges.**

History of substance use disorder

Economic hardships

Mental health struggles

Patients need care that is **comprehensive** and addresses all of their broader circumstances.

Clinicians

can treat additional mental and physical health conditions.

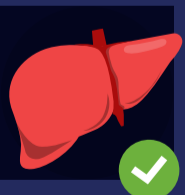

Advocates

can connect patients to support groups or financial support.

Policymakers

can reduce access barriers.

Patients with hepatitis C deserve **care that treats the whole patient.**
