

HOW **BIOLOGICS** EXPAND ACCESS TO **CANCER CARE**

BEFORE BIOLOGICS, cancer care relied on surgery, radiation, chemotherapy and stem cell transplants.

TODAY, BIOLOGICS BUILD ON THESE OPTIONS, offering advanced treatments that can address different disease pathways.

During cancer treatment, **BIOLOGICS CAN HELP BOOST IMMUNITY** and allow the body to recover.

BIOLOGICS EXPAND OPTIONS, giving patients more flexible care plans and a stronger voice in treatment decisions.

UNFORTUNATELY, THERE ARE BARRIERS that still limit access, including:

Insurance delays like prior authorization

High out-of-pocket costs

Travel challenges to reach specialists

PATIENTS DESERVE BETTER — better access and better options.
