

SYMPTOMS OF

HYPERTROPHIC CARDIOMYOPATHY

MANY PEOPLE LIVE WITH HYPERTROPHIC CARDIOMYOPATHY, or HCM, but don't know it.

THICKENING OF THE HEART MUSCLES can sometimes occur without any signs or symptoms.

SOME PEOPLE, HOWEVER, CAN **EXPERIENCE:**

Chest pain, especially during exercise.

Fainting, especially during or just after exercise.

Fast or pounding heartbeats, known as heart palpitations.

WHEN CLINICIANS AND PATIENTS **RECOGNIZE** SYMPTOMS, HCM can be treated more appropriately.

AWARENESS OF HCM SYMPTOMS CAN BE LIFESAVING.
